User Features

Admin Staff

- Login screen
- Register clients (name, surname, contact number, email address, allergies, emergency contacts)
- Manage appointments
 - View appointments
 - Edit appointments
 - Create appointments
 - Cancel appointments
 - Mark appointments as completed or cancelled
- Collect Doctor details if client was referred by one
- Create invoice for client after appointment, taking different costs into consideration.

Clients

- Newly registered clients create a password.
- Login for returning clients
- Display dashboard after logging in
 - Update personal info(name, surname, contact number, email address, allergies, emergency contacts)
 - Change passwords
 - View upcoming appointments
- View available appointments
- Book appointment (time slot, procedure, referred by doctor or not)
- Cancel appointments.

Short summary

The Windows and Web applications will use a light blue colour scheme, commonly seen in medical websites, to represent calmness, cleanliness, and trustworthiness. A reddish-pink accent will be added to blend with the blue, introducing a sense of healing, hope, and relaxation. Lighter shades like rose quartz and blush will create a luxurious, calming effect. White will also be used to symbolize purity, peace, and a clean, sterile environment.

The background will feature very light shades of oceanic blue to create a personal, calming atmosphere and avoid the harshness of bright colours. Buttons will have darker blush or rose quartz borders, helping them stand out subtly while maintaining a relaxed feel.

Black will be used for all text to ensure readability and professionalism. It provides a strong contrast against the light blue and pink tones, maintaining clarity and consistency throughout the design.

Images will feature neutral tones such as beige, browns, and whites to create a clean and professional look. Contrasting colours—mainly pink and blue—will be used carefully to evoke emotional engagement without creating visual noise.

I have chosen the following colour palette:

- **Black (#000000):** All text and headers
- **Light Pink (#FFEEEE):** Call-to-action buttons
- **Soft Blue (#E1F5FE and #B3E5FC):** Backgrounds and accents
- **Darker Pink (#FF3377):** Borders
- **Dashboard:** Light blue background with pink icons and black text
- **Web Forms:** White forms with pink borders and black text

Skins and Themes

I will focus on using calm colours throughout the Web and Windows applications to create a clean, calming, and trustworthy feeling for both admin staff and clients accessing the system.

I chose the MetroFramework, also known as Metro Modern UI, a free and open-source UI toolkit for Windows Forms. This framework replaces the traditional grey, boxy look of Windows Forms with a cleaner, minimalistic, and more professional design. Its softer colour scheme is ideal for a healthcare system and will not slow down performance—an important factor for medical applications.

The flat, minimalistic design supports the professional and calming environment required in healthcare settings. I will use functionalities such as Metro Buttons, Metro TextBoxes, and Metro MessageBoxes to allow for intuitive navigation and efficient handling of appointments and client data.

MetroFramework is compatible with .NET Framework 4. Below, I have provided a few screenshots of my chosen theme (Thielj, 2025). Access this [link](#) for more information regarding MetroFramework.

CSS Features

Possible CSS features I will include in both the Web and Windows applications (W3Schools, 2022) are:

- Hover effect on buttons
- Rounded button corners with consistent styling
- Consistent use of padding and margins
- Tooltips to provide extra information
- CSS Grid to ensure responsiveness across different screen sizes
- Consistent colour themes will be used throughout the web and windows application
- A consistent colour theme throughout both applications
